

Danio kysonensis. Nguyen Van Hao, Nguyen Thi Hoa Mua Ba Chay 2010.

Picture not available.

| | |
|-----------------|--|
| Scientific Name | Danio kysonensis |
| Common Name | None |
| Origin | Nam Khein spring, Nan Can commune, Ky Son district, Nghe province Vietnam. |
| Size. | Up to 15cm. |
| Comments. | This paper has recently been published (in spite of the date) and most of it is in the Vietnamese language. In the paper, there is a picture of a dead specimen sitting on a rock! The actual morphology of this species is mainly compared to Devario species and judging by the size and appearance of this new species, it is in my opinion, incorrectly named. It should have been named as a member of the Devario genus rather than Danio. I suspect that it is unlikely to be seen in the aquarium trade. |
