

Devario annandalei (Chaudhuri 1908)

© Heng Wah Choy.

Scientific Name:	<i>Devario annandalei</i> .
Common Name:	None known.
Origin:	Yangon Myanmar; Chao Phraya, Salween and Mekong basins.
Size:	Probably grows to around 100mm SL.

Comments:

Considering the wide area this species is reportedly found, it is surprising that has yet to be seen for sale. This species will need plenty of aquarium space. I would suggest that it will also like flowing water so a power head or internal filter would be a good idea.
