

Sundadanio.

The genus *Sundadanio* was until 2011 represented by just a single species (*Sundadanio axelrodi* (Brittain 1976)). The culmination of work over a period of some five years has resulted in no less than seven new species being named by Kevin Conway, Maurice Kottelat and Heok Hui Tan.

In the paper published in September 2011 the precise descriptions of the new species are given in detail. For those who want to view the full technical details, they can be found at the following http://www.pfeil-verlag.de/04biol/pdf/ief22_3_08.pdf together with pictures of the live specimens. Note: The pictures are copyright.

In addition, *Sundadanio axelrodi* has been redescribed.

The new species are as follows.

Sundadanio atomus Conway , Kottelat & Tan.2011

Sundadanio echinus Conway, Kottelat & Tan. 2011

Sundadanio gargula Conway, Kottelat & Tan. 2011

Sundadanio goblinus Conway, Kottelat & Tan. 2011

Sundadanio margarition Conway, Kottelat & Tan 2011

Sundadanio retiaris Conway, Kottelat & Tan 2011

Sundadanio rubellus Conway, Kottelat & Tan 2011.
